

IC Mode 10 fertilizer Unit

The IC Mode 10 fertilizer unit is a compact, modular irrigation and fertilization unit, ideal for indoor cultivation setups. Its design prioritizes ease of transport and installation in confined spaces, with the flexibility to expand up to 7 fertilizer dosing channels plus an acid dosing channel. The unit is constructed on a stainless steel skid and features a stainless-steel panel with an integrated touch screen panel PC, providing a user-friendly interface for seamless operation.

Powered by a Greenspec Computer (Dutch brand), the unit provides advanced automation options, controlling pump operations, irrigation flow, and independent dosing channels. With fertilization receipts and EC / Ph dosing system optimal water and nutrient delivery for enhanced crop yields.

Additionally, the system includes Climate Control capabilities, such as managing CO₂ levels, temperature, humidity, and lighting, offering complete environmental control for optimal plant growth.

All data is stored on the Greespec computer and has graphical representation. The Greenspec computer can be remote controlled.

Free software updates and easy to install additional software and fuctions..
